LITEPAPER

DISRUPTIVE

TOKEN

Table of Contents

1. Introduction

Introducing DISRUPTIVE token in the Disruptive Digital ecosystem is one step further that we take in our mission to create a world in which anyone can become their own bank and be able to manage their digital assets in a simple and safe manner.

This document does not represent any kind of financial advice. The present litepaper clearly describes a token launched / minted on Elrond Network, a Proof-of-Stake blockchain. It represents a form of incentivization for our delegators within the Disruptive Digital ecosystem and Elrond Network community.

As a Staking Provider on the Elrond blockchain, we are responsible to provide technical support, innovation, and education for our community. Therefore, we provide a reliable staking service for our delegators by using an optimized infrastructure for our nodes, including redundancy, monitoring, and security best practices. Our infrastructure works flawlessly, with no downtime, and is always on. This is how we contribute to network security and efficiency.

Our mission is to build, maintain and educate a community of passionate people who choose to stake their assets. We aspire to redefine the experience around money, onboarding people to a better future, a safer and fairer world. We believe that community is key and we want to reward this level of engagement and commitment. This is why we launch our token, the DISRUPTIVE token.

2. DISRUPTIVE Token

2.1. Overview

In our clear long-term vision aligned with Elrond's vision, we have a strong commitment to expanding our Disruptive ecosystem. Currently, it already includes two Delegation System Smart Contracts and a product, Kryptodots, a device for encoding and safely storing the secret phrase of non-custodial wallets.

Having in mind a continuously expanding community, we introduce the DISRUPTIVE token to our ecosystem. The main purpose of the token is to incentivize the users who are actively involved in our social channels, and who offer support and assistance in promoting news and educational materials within settled campaigns. All in one, the users who contribute to the adoption and decentralization.

Therefore, the Disruptive Digital ecosystem is in full expansion and currently includes:

Delegation System Smart Contracts:
⚡ Disruptive Digital ⚡
⚡ Disruptive Digital ULTD⚡

Product:
Kryptodots Backup Device

NFT:
Little Furry Devils - first CGI movie with NFT actors

Token:
DISRUPTIVE

2.2. Details

Name: DisruptiveDigital
Type: ESDT
Token: DISRUPTIVE-c20f7c
Owner: erd18cdlxvhh38je97kzyd39nheqxltkgfnw6d6qllpczr6p4klgaajqmhycjd
Supply: 1,200,000,000
Decimals: 18

Blockchain Token information:
https://explorer.elrond.com/tokens/DISRUPTIVE-c20f7c

2.3. Utility

The DISRUPTIVE token is an ESDT *(Elrond Standard Digital Token)* token with a relative fixed value.

It is not a stablecoin. It is an incentive token with a relative fixed value (i.e. price) that can be used for products and services acquisition.

The token will be distributed to certain addresses of non-custodial wallets in the Elrond blockchain. In the beginning, we will make an airdrop for our delegators. Afterward, it will be gradually and punctually distributed. It's a reward token. We will give it as a sign of appreciation for its owner's involvement in our brand activations.

In the beginning, the token has utility in our ecosystem. Holders are able to purchase Kryptodots products on kryptodots.com and afterward on our partners' websites. The token utility can reach new borders over time. We will stamp every update in this document.

3. Tokenomics

The model of operations in the DisruptiveDigital token economy will enable participants to earn Disruptive tokens by positively contributing to Disruptive Digital, Kryptodots, Elrond Network, and our Partners ecosystems. Disruptive Digital tokens are recognized as valuable assets in the Disruptive Digital ecosystem.

3.1 Token Distribution

In its early stage, the token will have an airdrop. We will distribute a certain amount to our delegators from both Delegation System Smart Contracts.

Afterward, the token will be gradually and punctually distributed, within settled campaigns and specific marketing activities in which users are asked to perform certain conditions. Every campaign will clearly mention the conditions that are to be performed in order to receive a fixed amount of DISRUPTIVE tokens.

Incentivisation of DISRUPTIVE tokens will be mainly addressed to Disruptive Digital delegators of both DSSCs, Disruptive Digital and Disruptive Digital ultd. Delegators who are actively involved in our social channels, and who promote and sustain our community will be rewarded accordingly.

Non-delegators who stand out through exceptional involvement in promotion, help, and support to Disruptive Digital, Kryptodots, Elrond Network, and our Partners also qualify for receiving the token, but under different circumstances.

The marketing campaigns will be organized in both online and offline environments.

No tokens will be distributed without fulfilling the conditions previously mentioned at the launching of each campaign.
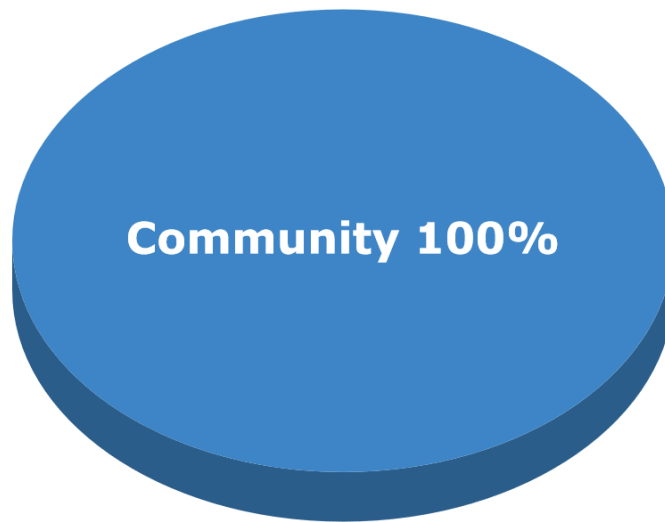

3.2 Token Scope

Through this token, we want to redefine the experience around money. We encourage the members of the community to engage and share educational content and information that would help the newcomers to the ecosystem to accustom themselves to different blockchain and crypto space terms.

The ultimate goal of every marketing campaign in which DISRUPTIVE tokens will be distributed is user adoption. It aims to help the onboarding of 1 billion users who use the Elrond blockchain.

3.3 Token Relative Value Stability

The Disruptive token economics is designed to incentivize people who contribute to the Disruptive Digital and KryptoDots ecosystem, and beyond, to Elrond Network, and our Partners. The token will have a relatively stable value by keeping a relatively stable rapport with our products and services throughout all our ecosystem.

4. Token allocation

The Disruptive Digital token will be distributed 100% within the Disruptive Digital & KryptoDots community.

5. Roadmap

01 PHASE

TOKEN LAUNCH
Token is minted on Elrond Network as an ESDT -
Elrond Standard Digital Token - with a relative fixed
value

02 PHASE

STARTING THE INCENTIVISATION
Will enable participants to earn Disruptive tokens by
contributing positively to Disruptive Digital, Kryptodots,
Elrond Network, and our Partners ecosystems

03 PHASE

THE EXPANSION
Expanding the partners websites that accepts Disrup-
tive Token

04 PHASE

DAO GOVERNANCE
Holders of the Disruptive token will have the power to
vote on proposals and updates, proportional to the
amount they hold
